

The onTAP Boundary Scan Network License Manager

The onTAP Network License Manager (ONLM) delivers provides the flexibility to operate onTAP over a network as a served application, increase productivity by enabling onTAP to be used where it is needed. The full development and test power of onTAP can now be shared throughout a network.

This type of license allows onTAP users the ultimate flexibility and productivity when connected to a shared network. Users may share project folders and tests while also sharing licenses.

onTAP boundary scan products are designed to run with node-locked, portable dongle-based, or network licenses.

onTAP License Types

Type	Usage	Flexibility	Usage Tracking	Control
Node Locked	One licene installed and locked to one computer	One license for each computer.	No	By individual
